

“Develop Taiwanese competency based domains in system-based practice, interpersonal relationship and communication, and practice-based leaning and improvement - integration with emotional competence training”

PI: Angela Fan (National Yang-Ming University)

Role: Co-principal investigator

Ministry of Science and Technology of Taiwan: 08/01/2018-07/31/2019

This research aims to investigate the three core competencies, namely System-Based Practice, Interpersonal Relationship and Communication, and Practice-Based Learning and Improvement. This study intends to lay emotional competence as the common groundwork for medical education and training of above core competencies and to investigate into emotional competence and its association with clinical core competencies. We plan to develop local domains of competence as well as use the local data to design intervention on emotional competence.
